BANGOPS Studio Operations System • 24/7 Agent Walkthrough

1 Hour = 1 Credit Model • Google Workspace Native • Supabase Postgres • Groq / Mistral / Jev

SINGLE-PAGE END-TO-END SCENARIO

1. FRONT-END: WHAT EMPLOYEE TYPES & SEES (GOOGLE CHAT)

PHASE 1: MORNING CHECK-IN (09:30 AM) ZERO MANUAL FORMS

🤖 **BangOps Bot:** "Morning Akash. Are you coming into the studio today?"

[In Studio] [Remote] [Sick / Leave]

User taps **[In Studio]** → Bot prompts active projects:

1. STC: BPillar 2. Nexa 3. Essent

Locks in **2.5 Hours** focus sprint.

PHASE 2: SPRINT WRAP-UP & TIME LOGGING (12:00 PM) ZERO FORGOTTEN HOURS

🤖 **BangOps Bot:** "2.5h on STC: BPillar is up. What did you get done?"

"Finished door cap CAD modeling and added NFC clips"

🤖 **BangOps Bot:** "Logged **2.5 credits** to your Resource Sheet: '*Completed door cap CAD modeling and integrated NFC sensor mount.*'"

PHASE 3: DRIVE & VENDOR QUOTING QUERY (02:30 PM) ZERO FOUNDER CHASING

"Who is the cheapest 3D print vendor for the front door panel?"

🤖 **BangOps Bot:** "Top Pick: **Design Roots** (₹37,940, 3–4 day lead time).
⚠️ **Spread Alert:** Avoid **BOTAAT** for this part. In recent quotes, BOTAAT charged ₹81,240 (over 2x markup on large panels)."

[📁 Open 3D Print Quote Comparison.xlsx]

PHASE 4: SICKNESS & SUB-OWNER FAILOVER (ANYTIME / 24/7) ZERO PROJECT STALLING

"Sick with fever today, won't be able to come in"

🤖 **BangOps Bot:** "Rest up Akash! Marked your sheet Leave = True. Alerting sub-owner Sarah K. to cover STC: BPillar CAD reviews."

Sarah receives 1:1 Google Chat Card:

"Akash is out sick on STC: BPillar. Can you cover today?"

[Yes, I can cover] [Plate is full]

2. BACK-END: WHAT HAPPENS AUTOMATICALLY BEHIND THE SCENES

BACKEND EXECUTION FLOW ~120MS LATENCY

CRON Office cron wakes up at 09:30 AM, querying active staff via Google Chat API.

JEV TypeSafe Jev parses button payload {status: "in_studio", project: "STC: BPillar"}.

SUPABASE Writes status to people.status = 'active'. Realtime dashboard reflects in-office status.

TIMER Registers local background timer for T + 2.5 hours to prompt for sprint completion.

BACKEND EXECUTION FLOW ~350MS LATENCY

GROQ / LLM Llama-3.1-8B rewrites casual message into crisp, client-facing deliverable text.

SHEETS API Authenticates with Google Workspace service account; targets Resource_Akash_Pai.xlsx.

SPREADSHEET Locates today's row (2026-09-21) in tab Sep 2026; appends [STC: BPillar | 2.5 | Deliverable].

SUPABASE Increments projects.credits_burned += 2.5. Founder dashboard updates live.

BACKEND EXECUTION FLOW ~580MS LATENCY

JEV Classifies intent as vendor_procurement_query with parameters [SLA ABS, Front Panel].

DRIVE API Scans Google Drive for 3D_Print_Vendors_Quote_Comparison.xlsx; extracts Row 24 & 46.

SUPABASE Fetches vendor contact (Design Roots, Bangalore) and past reliability rating (4.5★).

FLASH Synthesizes part-specific price driver warning and formats Google Chat Card with Drive link.

BACKEND EXECUTION FLOW ~220MS LATENCY

JEV Detects intent = sick_leave with 99.4% confidence; sets people.status = 'sick'.

SHEETS API Writes Leave = True, Total Hours = 0 to Akash's personal sheet automatically.

FAILOVER Looks up projects where lead_owner = Akash. Finds sub-owner Sarah K.

ESCALATION Sends coverage card to Sarah. If accepted: marks active lead. If declined: founders alerted.
